Pomodoro Technique

- The pomodoro technique increases productivity and focus by minimizing fatigue and task-switching.
- It helps combat procrastination by turning tasks into manageable chunks of time.
- People tend to experience a drop in attention after about 20 minutes of continuous focus. Inserting breaks before this decline occurs, helps prevent burnout.

1

Do I know exactly what I'm working on?

Are all distractions turned off or minimized?

Do I have everything I need to avoid disruptions?

Choose a task and get prepared.

2

Set a timer for 25 Minutes.

This is your first “pomodoro

3

Start working.

Work with full concentration until the timer rings. If a distraction comes up, jot it down and return to your tasks immediately

4

Take a break.

When the 25 minutes are up, take a 5-minute break. Stand up, stretch, hydrate, or breath deeply.

5

Take a longer break.

After every 4 pomodoros, take a longer break of 15-30 minutes to fully reset before starting the next cycle.
